PLASTIC AGRICULTURAL CONTAINERS

- Open side and base structure means reduced energy for cooling and guarantees freshness in storage and transportation
- Optimum protection of products in transportation by means of stable structure and rounded inner edges
- Hygienically perfect RPCs through cleaning after every use

The conversion from wood/corrugated packaging to plastic reusable packaging has brought many world-class companies significant financial and operational benefits.

TOTES, BASKETS, AND TRAY CONTAINERS

Ropak containers are not only tough and durable, but highly efficient and cost effective. Easily visible nest/stack indicators allow for error-free, spacesaving 3-to-1 nesting. The flat bottom design is ideal for conveyors, and the well designed stacking pads ensure that boxes won't slip or slide crops up.

This allows for highly efficient use of vertical space in coolers and warehouses. Finally, Ropak containers can be cleaned and sterilized without absorbing water.

TOUGHER THAN NAILS – IN COLD STORAGE OR DESERT SUMMERS

Hot or cold. Wet or dry. Ropak containers are tough. Nails and wood just don't have a chance against the high density polyethylene used in the construction of our containers. Throw them off a truck or stuff them into freezers, Ropak containers can't come apart at the seams because they are seamless. They can't absorb moisture or rot, so their bottoms won't fall out, and you will always have constant tare.

Ropak containers won't absorb moisture or chemicals, either (most chemicals won't affect them). There are also no pores for bacteria to hide and you'll never have to worry about splinters, staples, rusty nails, or wire getting into produce, hands, and garments.

ALSO AVAILABLE

- Staples and staplers
- Tape, stretch wrap, and strapping
- Hand trucks
- Pallet jacks
